

ABSTRACT

A toilet accessory concealment and toilet bowl evacuation apparatus designed to conceal common bathroom accessories as well as provide one with limited knowledge of plumbing systems with a safe and effective way to reduce the water level in a water closet bowl, or toilet bowl, to facilitate cleaning. The apparatus includes a water-tight primary compartment, a water-tight secondary compartment, and a cover configured to cooperate with the primary compartment and obscure the view of the inside of the primary compartment. The primary compartment is sized and configured to conveniently house a toilet brush, or other bathroom accessory, and retain a first predetermined quantity of liquid when the brush is not in the compartment. The secondary compartment is sized and configured to conveniently house a roll of toilet paper, or other bathroom accessory, and retain a second predetermined quantity of liquid when the roll of toilet paper is not in the compartment.
